REVOLUTIONARY STREET SWEEPER

Max Wind is a revolutionary street sweeper completely electric, attentive to the operators' needs and to the wellbeing of people it works among.

It is extremely manoeuvrable, agile even in small spaces, it quickly and effectively sucks, and is very simple maintenance.

Small in size and quiet, it is perfect for keeping historical centers, cycle paths, parks or public gardens clean: in fact it is also efficient on grass.

MAX WIND

WASTE IN BAG

The collection system in easily replaceable “disposable” bags, simplifies the emptying of the machine and protects the operator from contact with the dust.

LITHIUM ION BATTERY

Choice to install lithium-ion battery: it has a longer life and recharges faster than standard lead-acid batteries.

DETACHABLE CHARRIOT FOR OPERATOR

HIGH VISIBILITY FLASHING LIGHTS

SUCTION TUBE

It allows to reach the most narrow spaces and has a double suction power.

DUST CONTROL SYSTEM

The nebulization system on side brushes avoids the lifting of dust during work. A scented disinfectant can be added to the water tank to increase the effectiveness of the cleaning, and leaving a pleasant fresh feeling when passing through.

SHOCKPROOF BRUSHES

The brushes are mounted on elastic supports and retract when they encounter an obstacle.

STEEL BRUSHES

The improved motor of the side brushes also allows to mount steel brushes suitable for removing the most resistant encrustations from the sidewalks.

PRESSURE WASHER KIT

MP-HT METAL FRAME

The metal frame gives a constant structure to the machine and makes it able to absorb stress caused by uneven ground: ensures reliability and efficiency in the long run.

PERFECT FOR ANY AREA OF SMALL AND MEDIUM DIMENSIONS BOTH INTERNAL AND EXTERNAL

SIMPLE MAINTENANCE

The fairing is easily removed and it facilitates the ordinary maintenance operations also for not specialized operators.

RAISED FILTER WITH CYCLONE CHAMBER

The cyclonic filtering chamber has been developed to guarantee the lowest possible clogging of the filter and to allow it to work even in the presence of wet floors.

INTERCHANGEABLE FILTER

There are three types of filters available:

- paper, for standard use;
- polyester, able to withstand humidity;
- absolute filter effective for fine PM10 powders, even in wet conditions.

EASY TO TRANSPORT

The small size allows MAX WIND to be transported even in small vans, avoiding the use of vehicles that require specific licenses.

WORK IN SLOPE

The AC suction motor with low energy absorption does not steal power from the machine, able to operate even on sloping surfaces and steep ramps (20%).
